Due to the needs of our clients, our construction division is structured to offer full landscape planting, irrigation and hardscape construction services. As a compliment to our dedicated landscape construction division, Tolly's dedicated electrical and plumbing divisions provide seamless service as it pertains to site electrical, drainage and wet utility elements.

Planting/horticultural Services

Whether your project requires a gardener's touch or total site landscape installation, Tolly's in-house staff includes professionals with degrees in horticulture, and landscape designers to ensure proper care and dedication is applied to your landscape. Our design division is managed by our in-house licensed landscape architect, and we can produce illustrative sketches to full construction documents in order to assist our clients. Planting is a

unique asset investment, due to its life cycle dynamics. Tolly ensures a quality process through site prep, plant selection and final installation for our investment.

Construction

We pride ourselves on offering complete site prep and underground work associated with new landscape projects including clearing and grubbing, fine grading, state of the art irrigation systems, and drainage.

From a hardscape perspective we offer construction services related to the installation of concrete, stone and brick paving, retaining walls, hardscape features such as firepits and fireplaces, as well as masonry walls and other site features. We always install proper rebar and concrete mixes.

Smart Strategies

We actively work with our clients to assist them in incorporating design strategies that will directly lead to water consumptions savings such as adaptive and native plant designs and smart irrigation systems/

Low-Voltage Lighting Alternatives

Commercial landscape lighting, often over-looked, is a design element that can instantly add to a property's appeal. There have been exciting innovations in low-voltage lighting for commercial applications. The quality of low-voltage fixtures rivals line voltage fixtures while providing budget and design flexibility, added

safety elements and lower power consumption benefits. We have in-house lighting experts that can provide design ideas (including temporary evening lighting presentations), power consumption charts, continued lighting maintenance services, and replacements of often neglected existing landscape lighting systems.

Tolly Landscape is a fully bonded and insured contracting licensed for landscape construction (C27), General Building (B1), Electrical (C10) and Plumbing (C36). We provide construction services business and industrial developments, headquarters facilities, medical facilities, retail centers, universities, apartment complexes, and planned communities. Our commercial services are managed by professionals, whom in addition to practical field experience, possess degrees landscape architecture, engineering and construction management.

We care about our clients and our communities and we are active with civic efforts such as Olive Crest Homes and Services for Abused Children, Habitat for Humanity and various local schools.
